

TOP TIPS FOR MAINTENANCE

BURST WATER PIPE or WATER LEAK

If you have a burst water pipe, firstly locate the isolation valve/tap, if you are in an apartment, this may find this located in an access panel, under sink or in common hallway, turn the water flow off. If you are in a house or similar locate your water metre and turn off the tap.

Immediately contact your Asset Manager if during office hours. If outside of office, hours refer to the Emergency Tab for details.

To minimise damage to the property, your assistance to commence absorption of the water is greatly appreciated.

Make safe any electrical hazards - turn off power at metre box if required.
